Producer-Consumer Problem

Q2 Hospital Patient Registration – User-Defined Exception

10 marks

Develop a Java program for a hospital patient registration system. The program accepts the patient's name, age, and body temperature.

Create suitable user-defined exception classes for invalid age and invalid temperature. Validate the input before registration. Use try-catch-finally and display a registration completion message from finally.

Sample Test Cases:

Input / Scenario Expected Result Purpose

Arun, 35, 98.6 Patient registered successfully Normal case

Meena, 12, 98.4 InvalidAgeException Boundary / exception case

Ravi, 45, 105.2 InvalidTemperatureException Invalid input

Kumar, -2, 98.1 InvalidAgeException Invalid input

Your Code

```
1 import java.util.Scanner;  
2 import java.util.InputMismatchException;  
3  
4 class InvalidAgeException{
```

Input

Arub 35 98.6

10 marks

5/5 answered

```

5 static class AgeException extends Exception{
6 }
7     static class TemperatureException extends Exception{
8
9     }
10 public static void main(String[] args) {
11     Scanner sc = new Scanner(System.in);
12
13     try{
14         String name = sc.next();
15         int age = sc.nextInt();
16         double temperature = sc.nextDouble();
17
18         if(age <= 0){
19             throw new AgeException();
20         }
21         if(temperature<95 || temperature > 104)
22         {
23             throw new
24                 TemperatureException();
25         }
26         System.out.println("Patient registered
27     } catch(AgeException e) {
28         System.out.println("InvalidAgeException
29     } catch(TemperatureException e) {
30         System.out.println("InvalidTemperatureE
31     } catch(InputMismatchException e) {
32         System.out.println("Invalid input");
33     } finally{
34         System.out.println("Registration compl
35     }
36 }
37 }

```

Output

```

Patient registered
successfully
Registration completed :

```
